Module 3 Lab Exercise: Machine Learning Workflow and Types of Learning

Learning Objectives

By the end of this lab, you will be able to:

- · Distinguish between supervised, unsupervised, and reinforcement learning
- · Understand the complete machine learning workflow
- · Build and evaluate your first classification model
- · Work with different types of data (numerical, categorical, text, images)
- Apply the end-to-end ML process: data → model → evaluation → insights

Prerequisites

- · Completed Module 2 (familiar with Python libraries and Jupyter/Colab)
- · Understanding of basic data operations and visualization
- · Access to your GitHub repository for saving work

Part 1: Understanding Types of Machine Learning

Machine learning can be categorized into three main types. Let's explore each with practical examples.

1. Supervised Learning

Definition: Learning from labeled examples to make predictions on new, unseen data.

Examples:

- Classification: Predicting categories (spam/not spam, disease/healthy)
- Regression: Predicting continuous values (house prices, temperature)

Key Characteristic: We have both input features (X) and correct answers (y) during training.

2. Unsupervised Learning

Definition: Finding hidden patterns in data without labeled examples.

Examples:

- Clustering: Grouping similar customers for marketing
- · Dimensionality Reduction: Simplifying complex data while keeping important information

Key Characteristic: We only have input features (X), no correct answers during training.

3. Reinforcement Learning

Definition: Learning through trial and error by receiving rewards or penalties.

Examples:

- · Game playing (chess, Go)
- · Autonomous vehicles
- · Recommendation systems that learn from user feedback

Key Characteristic: Agent learns by interacting with an environment and receiving feedback.

For this course, we'll focus primarily on supervised learning, with some unsupervised learning in later modules.

Part 2: Setting Up Our Machine Learning Environment

Let's start by importing our libraries and loading a dataset that will help us understand the ML workflow.

Import essential libraries
import pandas as pd
import numpy as np
import matplotlib.pyplot as plt

```
import seaborn as sns
from sklearn.datasets import load_wine, make_classification
from sklearn.model_selection import train_test_split
from sklearn.linear_model import LogisticRegression
from sklearn.tree import DecisionTreeClassifier
from sklearn.metrics import accuracy_score, classification_report, confusion_matrix
from sklearn.preprocessing import StandardScaler
import warnings
warnings.filterwarnings('ignore')
# Set style for better-looking plots
plt.style.use('default')
sns.set_palette("husl")
print("▼ All libraries imported successfully!")
print("

Ready to start our machine learning journey!")
All libraries imported successfully!
  Ready to start our machine learning journey!
```

Part 3: Loading and Exploring Our Dataset

We'll use the Wine dataset - a classic dataset for classification. It contains chemical analysis of wines from three different cultivars (types) grown in Italy.

```
# Load the Wine dataset
wine_data = load_wine()
# Convert to DataFrame for easier handling
df = pd.DataFrame(wine_data.data, columns=wine_data.feature_names)
df['wine_class'] = wine_data.target
df['wine_class_name'] = [wine_data.target_names[i] for i in wine_data.target]
print("Dataset Information:")
print(f"Shape: {df.shape}")
print(f"Features: {len(wine_data.feature_names)}")
print(f"Classes: {wine_data.target_names}")
print(f"\nFirst 5 rows:")
print(df.head())
Dataset Information:
Shape: (178, 15)
Features: 13
Classes: ['class_0' 'class_1' 'class_2']
First 5 rows:

```

Part 4: Exploratory Data Analysis (EDA)

Before building models, we need to understand our data. This is a crucial step in the ML workflow.

```
# Visualize class distribution
plt.figure(figsize=(12, 4))
# Subplot 1: Class distribution
plt.subplot(1, 2, 1)
class_counts = df['wine_class_name'].value_counts()
plt.bar(class_counts.index, class_counts.values, color=['red', 'green', 'blue'])
plt.title('Distribution of Wine Classes')
plt.xlabel('Wine Class')
plt.ylabel('Number of Samples')
plt.xticks(rotation=45)
# Subplot 2: Feature correlation heatmap (first 6 features for clarity)
plt.subplot(1, 2, 2)
correlation_matrix = df.iloc[:, :6].corr()
sns.heatmap(correlation_matrix, annot=True, cmap='coolwarm', center=0, fmt='.2f')
plt.title('Feature Correlations (First 6 Features)')
plt.tight_layout()
plt.show()
print(" EDA helps us understand:")
print("- Class balance (are all classes equally represented?)")
print("- Feature relationships (which features are correlated?)")
print("- Data quality (any outliers or issues?)")
                      Distribution of Wine Classes
                                                                                       Feature Correlations (First 6 Features)
                                                                                                                                        1.0

              1855)
                                                                                                      ash
                                                                                                              alcalinity of ash
                                                                                                                             total_phenols
                                                                                              malic_acid
                                                                                                                      magnesium
                                Wine Class
■ EDA helps us understand:
 Class balance (are all classes equally represented?)
- Feature relationships (which features are correlated?)
- Data quality (any outliers or issues?)
```

Part 5: The Complete Machine Learning Workflow

Now let's implement the standard ML workflow step by step:

The 6-Step ML Workflow:

- 1. Data Preparation: Clean and prepare the data
- 2. Feature Selection: Choose relevant input variables
- 3. Data Splitting: Separate training and testing data
- 4. Model Training: Teach the algorithm using training data
- 5. Model Evaluation: Test performance on unseen data
- 6. Model Interpretation: Understand what the model learned

Let's implement each step!

```
# Step 1: Data Preparation
print("Step 1: Data Preparation")
print("=" * 30)
# Select features (X) and target (y)
# For simplicity, let's use the first 4 features
feature_names = ['alcohol', 'malic_acid', 'ash', 'alcalinity_of_ash']
X = df[feature names]
y = df['wine_class']
print(f"Selected features: {feature_names}")
print(f"Feature matrix shape: {X.shape}")
print(f"Target vector shape: {y.shape}")
# Display first few rows
print("\nFirst 5 samples:")
print(X.head())
Step 1: Data Preparation
Selected features: ['alcohol', 'malic_acid', 'ash', 'alcalinity_of_ash']
Feature matrix shape: (178, 4)
Target vector shape: (178,)
First 5 samples:
  alcohol malic_acid ash alcalinity_of_ash
   14.23
              1.71 2.43
                                          15.6
     13.20
                 1.78 2.14
                                          11.2

Part 6: Understanding Different Data Types in ML

Machine learning works with various types of data. Let's explore the main categories:

```
# Understanding Different Data Types in ML
print("Understanding Data Types in Machine Learning")
print("=" * 45)
# Create examples of different data types
data_examples = {
    'Numerical (Continuous)': [23.5, 45.2, 67.8, 12.1, 89.3],
    'Numerical (Discrete)': [1, 5, 3, 8, 2],
    'Categorical (Nominal)': ['Red', 'Blue', 'Green', 'Red', 'Blue'],
    'Categorical (Ordinal)': ['Low', 'Medium', 'High', 'Medium', 'Low'],
    'Text': ['Hello world', 'Machine learning', 'Data science', 'Python programming', 'AI revolution'],
    'Boolean': [True, False, True, True, False]
for data_type, examples in data_examples.items():
    print(f"\n{data_type}:")
    print(f" Examples: {examples}")
   print(f" Use case: ", end="")
   if 'Continuous' in data_type:
       print("Regression problems (predicting prices, temperatures)")
    elif 'Discrete' in data_type:
       print("Counting problems (number of items, ratings)")
    elif 'Nominal' in data_type:
       print("Classification without order (colors, categories)")
    elif 'Ordinal' in data_type:
        print("Classification with order (ratings, sizes)")
    elif 'Text' in data_type:
       print("Natural language processing (sentiment analysis, translation)")
   elif 'Boolean' in data_type:
       print("Binary classification (yes/no, spam/not spam)")
print("\n♀ Key Insight: Different data types require different preprocessing and algorithms!")
```

```
Understanding Data Types in Machine Learning
Numerical (Continuous):
  Examples: [23.5, 45.2, 67.8, 12.1, 89.3]
 Use case: Regression problems (predicting prices, temperatures)
Numerical (Discrete):
  Examples: [1, 5, 3, 8, 2]
  Use case: Counting problems (number of items, ratings)
Categorical (Nominal):
  Examples: ['Red', 'Blue', 'Green', 'Red', 'Blue']
 Use case: Classification without order (colors, categories)
Categorical (Ordinal):
  Examples: ['Low', 'Medium', 'High', 'Medium', 'Low']
  Use case: Classification with order (ratings, sizes)
Text:
  Examples: ['Hello world', 'Machine learning', 'Data science', 'Python programming', 'AI revolution']
 Use case: Natural language processing (sentiment analysis, translation)
Boolean:
  Examples: [True, False, True, True, False]
  Use case: Binary classification (yes/no, spam/not spam)
💡 Key Insight: Different data types require different preprocessing and algorithms!
```

Part 7: Hands-On Practice - Build Your Own Model

Now it's your turn! Complete the following tasks to reinforce your learning.

```
# Task 1: Try different features
print("Task 1: Experiment with Different Features")
print("=" * 40)
# Your task: Select 3 different features and build a model
# Available features:
print("Available features:")
for i, feature in enumerate(wine_data.feature_names):
    print(f"{i+1:2d}. {feature}")
# TODO: Replace these with your chosen features
your_features = ['alcohol', 'color_intensity', 'proline'] # Modify this list
# Build model with your features
X_your = df[your_features]
X_train_your, X_test_your, y_train_your, y_test_your = train_test_split(
    X_your, y, test_size=0.2, random_state=42, stratify=y
# Train a logistic regression model
your_model = LogisticRegression(random_state=42)
your_model.fit(X_train_your, y_train_your)
# Evaluate
y_pred_your = your_model.predict(X_test_your)
your_accuracy = accuracy_score(y_test_your, y_pred_your)
print(f"\nYour model features: {your_features}")
print(f"Your model accuracy: {your_accuracy:.3f} ({your_accuracy*100:.1f}%)")
# Compare with original model
print(f"Original model accuracy: {results['Logistic Regression']:.3f}")
if your_accuracy > results['Logistic Regression']:
   print(" Great job! Your feature selection improved the model!")
else:
    print("5 Try different features to see if you can improve performance!")
Task 1: Experiment with Different Features
Available features:
1. alcohol
2. malic_acid
3. ash
4. alcalinity_of_ash
```

```
5. magnesium
6. total_phenols
7. flavanoids
8. nonflavanoid_phenols
9. proanthocyanins
10. color_intensity
11. hue
12. od280/od315_of_diluted_wines
13. proline

Your model features: ['alcohol', 'color_intensity', 'proline']
Your model accuracy: 0.833 (83.3%)
Original model accuracy: 0.889

Try different features to see if you can improve performance!
```

Part 8: Assessment - Understanding ML Concepts

Answer the following questions to demonstrate your understanding:

```
# Assessment Task 1: Identify the ML type
print("Assessment Task 1: Identify Machine Learning Types")
print("=" * 50)
# For each scenario, identify if it's Supervised, Unsupervised, or Reinforcement Learning
scenarios = [
    "Predicting house prices based on size, location, and age",
    "Grouping customers by purchasing behavior without knowing groups beforehand",
    "Teaching a robot to play chess by playing many games",
    "Classifying emails as spam or not spam using labeled examples",
    "Finding hidden topics in news articles without predefined categories"
1
# Your answers (replace 'TYPE' with Supervised, Unsupervised, or Reinforcement)
your_answers = [
                       # Scenario 1
    "Supervised",
    "Unsupervised",
                      # Scenario 2
    "Reinforcement",
                      # Scenario 3
                      # Scenario 4
    "Supervised",
    "Unsupervised"
                      # Scenario 5
]
# Check answers
correct_answers = ["Supervised", "Unsupervised", "Reinforcement", "Supervised", "Unsupervised"]
print("Scenario Analysis:")
score = 0
for i, (scenario, your_answer, correct) in enumerate(zip(scenarios, your_answers, correct_answers)):
    is_correct = your_answer == correct
    score += is_correct
    status = "✓" if is_correct else "X"
    print(f"{status} {i+1}. {scenario}")
    print(f"
              Your answer: {your_answer} | Correct: {correct}")
    print()
print(f"Score: {score}/{len(scenarios)} ({score/len(scenarios)*100:.0f}%)")
Assessment Task 1: Identify Machine Learning Types
Scenario Analysis:
🔽 1. Predicting house prices based on size, location, and age
   Your answer: Supervised | Correct: Supervised
🔽 2. Grouping customers by purchasing behavior without knowing groups beforehand
   Your answer: Unsupervised | Correct: Unsupervised
3. Teaching a robot to play chess by playing many games
   Your answer: Reinforcement | Correct: Reinforcement

✓ 4. Classifying emails as spam or not spam using labeled examples

   Your answer: Supervised | Correct: Supervised
🔽 5. Finding hidden topics in news articles without predefined categories
   Your answer: Unsupervised | Correct: Unsupervised
Score: 5/5 (100%)
```

Part 9: Real-World Applications and Case Studies

Let's explore how the concepts we've learned apply to real-world scenarios.

Case Study 1: Recommendation Systems (Netflix, Amazon)

Problem: Suggest movies/products users might like **ML Type:** Hybrid (Supervised + Unsupervised + Reinforcement) **Data:** User ratings, viewing history, product features **Workflow:** Collect data → Build user profiles → Train models → Make recommendations → Learn from feedback

Case Study 2: Fraud Detection (Banks, Credit Cards)

Problem: Identify fraudulent transactions **ML Type**: Supervised Learning (Classification) **Data**: Transaction amounts, locations, times, merchant types **Workflow**: Historical fraud data → Feature engineering → Train classifier → Real-time scoring → Continuous monitoring

Case Study 3: Medical Diagnosis (Healthcare)

Problem: Assist doctors in diagnosing diseases **ML Type**: Supervised Learning (Classification) **Data**: Medical images, patient symptoms, lab results **Workflow**: Labeled medical data → Image processing → Train deep learning models → Clinical validation → Deployment with human oversight

Your Turn: Think of Applications

Consider these industries and think about how ML could be applied:

- Transportation: Autonomous vehicles, route optimization
- Agriculture: Crop monitoring, yield prediction
- Education: Personalized learning, automated grading
- · Entertainment: Content creation, game Al

Part 10: Complete ML Workflow Summary

Let's summarize the complete machine learning workflow we've learned:

- Problem Definition

 Data Collection & Exploration
 Data Preprocessing & Feature Engineering
 Model Selection & Training
 Model Evaluation & Validation
 Model Deployment & Monitoring
 Continuous Improvement
- Checklist for Every ML Project:

Data Phase:

- Understand the problem and define success metrics
- Collect and explore the dataset
- Check for missing values, outliers, and data quality issues
- Usualize data to understand patterns and relationships

Modeling Phase:

- Split data into training and testing sets
- Select appropriate algorithms for the problem type
- $\ \square$ Train multiple models and compare performance
- Devaluate using appropriate metrics (accuracy, precision, recall, etc.)

Deployment Phase:

- Validate model performance on new data
- Document the model and its limitations
- Deploy responsibly with monitoring systems
- Plan for model updates and maintenance

Key Takeaways:

- 1. Start Simple: Begin with basic models before trying complex ones
- 2. Understand Your Data: EDA is crucial for success
- 3. Validate Properly: Always test on unseen data
- 4. Iterate: ML is an iterative process of improvement
- 5. Document Everything: Keep track of experiments and results

Your Reflection and Analysis

Instructions: Complete the reflection below by editing this m

My Understanding of Machine Learning Types

- **Supervised Learning**: My understanding of Machine Learning is is when a machine or AI is trained on data that already kinda has answers. So, basically, over time is can predict the unseen data.
- **Unsupervised Learning**: AI is on its own. Not given any answer given some inputs and has to find patterns or structure on its ow
- **Reinforcement Learning**: Reinforcement learning is more like t error. The computer takes action and sees if its gets the reward Then adjusts itelf based on that. It adapts.

My Analysis of the Wine Classification Project

- **Best performing model**: Class 0
- **Why do you think this model performed better?**: Better precisi
- **What would you try next to improve performance?**: More Polyphe

Real-World Application Ideas

- **Industry of Interest**: Healthcare and fitness
- **ML Problem**: Helping people keep track of their nutrition and predicting possible deficiencies or health risks based on their d lifestyle.
- **Type of ML**: Supervised learning because the system would need data with labels, like food intake matched with blood test result by predicting possible deficiencies or health risks based on their diet health outcomes to learn from.
- **Data Needed**: Info like daily food logs, supplement intake, ex Type of ML: Supervised learning because the system would need routines, blood test results, maybe even those wearable devices 1 watches for activity to get certain data.

Key Learnings

- **Most important concept learned**: Getting a clearer picture of different types of ML fit into the overall environment
- **Most challenging part**: Trying to understand without prior kno
- **Questions for further exploration**: Is there a gasme or site y suggest for me to go onto to learn more of this outside of class would recommend?

My Understanding of Machine Learning Types

Supervised Learning: My understanding of Machine Learning is that it is when a machine or AI is trained on data that already kinda has the answers. So, basically, over time is can predict the unseen data.

Unsupervised Learning: Al is on its own. Not given any answers. It's given some inputs and has to find patterns or structure on its own.

Reinforcement Learning: Reinforcement learning is more like trial and error. The computer takes action and sees if its gets the reward or not. Then adjusts itelf based on that. It adapts.

My Analysis of the Wine Classification Project

Best performing model: Class 0

Why do you think this model performed better?: Better precision

What would you try next to improve performance?: More Polyphenols

Real-World Application Ideas

Industry of Interest: Healthcare and fitness

ML Problem: Helping people keep track of their nutrition and health and lifestyle.

past data with labels, like food intake matched with blood test results or health outcomes to learn from.

Data Needed: Info like daily food logs, supplement intake, exercise routines, blood test results, maybe even those wearable devices like smart watches for activity to get certain data.

Key Learnings

Most important concept learned: Getting a clearer picture of how different types of ML fit into the overall environment

Most challenging part: Trying to understand without prior knowledge.

Questions for further exploration: Is there a gasme or site you could suggest for me to go onto to learn more of this outside of class

Lab Summary and Next Steps

- @ What You've Accomplished:
- ✓ Understood ML Types: Supervised, Unsupervised, and Reinforcement Learning
- **Mastered ML Workflow**: Data → Model → Evaluation → Insights
- ✓ Built Classification Models: Logistic Regression and Decision Trees
- Evaluated Model Performance: Accuracy, Confusion Matrix, Classification Report
- Worked with Real Data: Wine dataset analysis and modeling
- Applied Best Practices: Data splitting, model comparison, interpretation
- Preparation for Module 4:

In the next lab, you'll dive deeper into:

- Exploratory Data Analysis (EDA): Advanced visualization techniques
- Data Quality Assessment: Handling missing values, outliers, and duplicates
- Statistical Analysis: Understanding distributions and relationships
- Data Storytelling: Communicating insights effectively

Action Items:

- 1. Upload this notebook to your GitHub repository
- 2. Experiment with different features in the wine dataset
- 3. Try other datasets from sklearn.datasets (digits, breast_cancer, boston)
- 4. Practice the 6-step ML workflow on a new problem
- 5. Document your experiments and findings

- Scikit-learn User Guide
- Machine Learning Mastery
- Kaggle Learn Free micro-courses
- Google's Machine Learning Crash Course

Reflection Questions:

- 1. Which type of machine learning (supervised/unsupervised/reinforcement) interests you most and why?
- 2. What was the most challenging part of the ML workflow for you?
- 3. How might you apply these concepts to a problem in your field of interest?
- 4. What questions do you have about machine learning that you'd like to explore further?

Congratulations on completing Module 3! You've taken a significant step in your machine learning journey.

Remember: Machine learning is a skill that improves with practice. Keep experimenting, stay curious, and don't be afraid to make mistakes
